

Hint

When adding and subtracting decimal numbers, make sure you line them up according to the location of the decimal. If there is not a decimal in the number, put one after the last digit on the right and put a zero to the right of the decimal for every empty place value to match the other digits. A common mistake is to just write one number under the other without paying attention to the place values.

$$123 + 45.9$$

$$\begin{array}{r} 123.0 \\ + 45.9 \\ \hline \end{array}$$
