**Possible Solutions**

<u>Using an Area Model</u>

$\frac{1}{3}$ acre

1 brother's section

$$\frac{1}{3} \div 4 = \frac{1}{12}$$

<u>Using a Number Line</u>

$$4 \div \frac{1}{3}$$

$\frac{1}{3}$ $\frac{1}{3}$ $\frac{1}{3}$ $\frac{1}{3}$ $\frac{1}{3}$ $\frac{1}{3}$ $\frac{1}{3}$ $\frac{1}{3}$ $\frac{1}{3}$ $\frac{1}{3}$ $\frac{1}{3}$ $\frac{1}{3}$

0          1          2          3          4

It takes twelve $\frac{1}{3}$ jumps to get to 4.

$$4 \div \frac{1}{3} = 12$$
